

A Hoopoe bird is perched on a horizontal, light-brown tree branch. The bird has a distinctive fan-like crest of orange and black feathers on its head. Its body is primarily light brown with black and white horizontal stripes on its wings and back. It has a long, dark, slightly curved beak, into which it is holding a small, light-colored caterpillar. The background is a soft, out-of-focus green, suggesting a forest or garden setting.
